CAREER OBJECTIVE

I am seeking a backend or full-stack internship / junior developer role where I can apply my Python and Django skills to build reliable, well-optimized web applications and APIs while learning from experienced engineers. My earlier hands-on work in mobile device repair and electronics taught me to diagnose faults patiently and systematically, an approach I bring to debugging code.

PERSONAL SUMMARY

Self-taught Full-Stack Developer with hands-on experience designing, building, and deploying web applications, REST APIs, and mobile-integrated systems. Proficient in Python, Django and Flutter with practical experience delivering production ready platform. Experienced in frontend and backend development, API integration, authentication, caching and rate limiting with a focus on building functional, reliable, and maintainable software.

EDUCATION

University of Ilorin, Ilorin, Nigeria current
B.Sc. Computer Science

Toyibat Group of Schools, Lagos, Nigeria 2025
Senior Secondary School Certificate

Government Day Secondary School (GDSS), Ilorin, Nigeria 2020 – 2021
Senior Secondary School

St Luke's Junior Grammar School, Lagos, Nigeria 2017 – 2020
junior Secondary School

Funbim Private School, Lagos, Nigeria 2010 – 2017
First School Leaving Certificate

TECHNICAL SKILLS

Languages and Frameworks: Flutter(primary), Python (primary), Django, Django REST Framework, Django Channels

Frontend: HTML, CSS and JavaScript at working level with strong ability to read, find and fix bugs; understanding of how the DOM works; HTMX and AJAX for dynamic pages with minimal JavaScript

System Design: Client-server architecture, REST API design, separation of concerns, asynchronous task processing, real-time communication using WebSockets, and integration between mobile applications and backend services.

Databases: PostgreSQL and relational data modelling via the Django ORM.

Caching: Caching heavy, slow-changing data and invalidating the cache whenever the data is updated

Rate Limiting: IP-based limiting and reading the real client IP from the X-Forwarded-For header when behind Cloudflare

Security: Authentication and authorization; Web Push notifications using VAPID

Deployment: Production deployment on Render and Vercel

Mobile: Flutter app connected to a Django REST API.

Hardware: Mobile device repair, fault diagnosis and electronics troubleshooting

PROJECTS

AbuReport: Nigerian News Platform Latest project

abureport.com.ng | *Python, Django, PostgreSQL, HTMX, HTML, CSS, JavaScript*

- Built and deployed a live news platform covering 12 categories (JAMB, WAEC, NECO, University, Scholarship and more) with an archive, editorial team page, and about 100 stories published.
- Reduced load on a home page that needed 30+ database queries (even after query optimization and N+1 removal) by caching the data and clearing the cache only when content is updated, so first visitor triggers one database hit and everyone after is served from cache.
- Added user accounts (sign up / log in), a "read later" bookmark feature, and email newsletter subscriptions.
- Used HTMX for AJAX interactions in place of heavy JavaScript; added SEO and Open Graph metadata for search and social sharing.
- Supports multiple contributing authors and includes a reporter-recruitment flow and an advertising/partnership page.

HTTPChat: Real-Time Chat and Social Feed

http-chat-sigma.vercel.app | *Python, Django, Django Channels*

- Built a WhatsApp-style messaging app with one-to-one chats and group creation using Django Channels (WebSockets).
- Added a Twitter-style feed where users can create, view and edit posts.
- Implemented authentication and authorization to control access to user data and actions.

Discipline and Streak: Task Reminder App

Python, Django, Web Push (VAPID), JavaScript, html, css.

- Built a web app for setting personal tasks and receiving reminders through browser push notifications (VAPID).

Lecture Tracker: API and Mobile App First project

lecture-tracker-omega.vercel.app/v2 | *Django REST Framework, PostgreSQL, Flutter*

- Developed a REST API with Django REST Framework and PostgreSQL for students to keep track of lectures, consumed by a Flutter mobile app.
- Added an AI-assisted web interface (HTML, CSS, JavaScript) and a separate mobile app with AI analysis.

EXPERIENCE

Mobile Device Repair and Electronics Self-employed

- Diagnosed and repaired faults on mobile devices.
- Applied practical, component-level electronics skills to troubleshooting.

ACHIEVEMENTS

- Earned the GitHub Pull Shark achievement for merged pull requests.
- Built and launched four projects, one of which is a live, publicly accessible news platform serving live users.

KEY STRENGTHS

- Fast, practical debugging: finding the cause of a problem and fixing it.
- Building and deploying complete products from database to live website.
- Performance awareness: caching, query optimization and rate limiting.
- Self-taught and quick to pick up new tools.
